## Introduction

This document provides an in high level outline proposed implementation plan and pricing. The implementation plan includes a description of services, project timelines and roles and responsibilities of KMS Lighthouse and Gainwell teams. The document also includes estimated project implementation costs of services based on the scope of project and information gained from the RFP and meetings with the Gainwell team.

### KMS Lighthouse Hosted Cloud Project

The following implementation phases will be completed by KMS Lighthouse in collaboration with the Gainwell team in a capacity outlined below. As the final project is subject to change, related fees must be approved by both parties before the Order Form is executed. An initial kick-off call will take place to confirm milestones and needs of each phase.

### Implementation Project Details

One time deployment according to the use case

- Server architecture (application, search and database configuration)
- Monitoring configuration for KMS Lighthouse to provide proactive support
- Security configurations based on the KMS Lighthouse standard and optional customer deployments including IP range restrictions or disk encryption
- SSO via SAML 2.0 and user sync set up and configuration via LDAP queries or SCIM

Branded system design to align with customer brand book colors

- Preparation of system design mockups based on customer brand book and images shared (at least 2 options presented for review)
- Review and approval by customer of the chosen design including up to two rounds of revisions
- Implementation of the approved design

Business analysis for up to two lines of business: call center and non-call center users

- Kick-off meeting to determine focal points and schedule applicable meetings
- Roundtable discussions with the 2 lines of business to understand the use case and requirements in detail. These sessions will include a review of the existing knowledge management deployments, knowledge review and questionnaire to plan and prioritize knowledge creation.
- Sample questions and areas covered:
  - How is knowledge managed today and what are the current knowledge management tools in place?
  - Who is the team responsible for managing the knowledge?
  - When is knowledge required by the users?
  - How much of the knowledge required is maintained in existing systems and how much is unformalized?
  - Do you have any statistics of the existing knowledge usage? Do you have reporting of the subjects for interactions?
  - What are the biggest challenges with the existing tools and approach?

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <ul style="list-style-type: none"> <li>Review of existing knowledge and systems – the customer will present and demo the existing systems and show samples of the knowledge content. Content should be sent to the KMS Lighthouse team for review and planning.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <p>Template creation, review and approval</p> <ul style="list-style-type: none"> <li>Based on the insights from the business analysis sessions and the sample content shared by the customer, the KMS Lighthouse team will prepare content templates for the specific use cases.</li> <li>Templates typically cover broad areas to support the creation of multiple articles of a similar type for the same use case, template examples include plans, products, promotions and processes.</li> <li>The templates are created for the specific use cases and prepared within the KMS Lighthouse Wizard leveraging the best practices methodology.</li> <li>The KMS Lighthouse team will prepare at least 2 example articles, using the customer content for each template.</li> <li>KMS Lighthouse will review the templates created with the customer explaining the methodology and logic behind their creation and make adjustments based on the review sessions to ensure the templates fully align with the customer need.</li> </ul>                                                                                                                                                                    |
| <p>Content manager training</p> <ul style="list-style-type: none"> <li>KMS Lighthouse will provide detailed training to the users defined by the customer that will be creating and updating knowledge in the KMS Lighthouse application.</li> <li>The training sessions will be run remotely via online sessions which will include tutorials, demonstrations and activities. Typically, KMS Lighthouse training sessions are defined for up to 10 people to ensure a successful and focused training course, but KMS Lighthouse will support up to 15 people per session to provide further flexibility if needed.</li> <li>The training will focus on: <ul style="list-style-type: none"> <li>Understanding the key system functionality</li> <li>How to create and update structured knowledge articles</li> <li>How to create and update decision trees (scenarios)</li> <li>Best practices for content creation</li> <li>Authorization controls to publish content to specific groups of users</li> </ul> </li> <li>KMS Lighthouse will provide access to the KMS Lighthouse Knowledge Portal for content managers to see online guides and materials regarding the KMS Lighthouse solution.</li> </ul> |
| <p>Content migration support</p> <ul style="list-style-type: none"> <li>Following the content manger training, customers are equipped to create and update their knowledge articles in the KMS Lighthouse application.</li> <li>KMS Lighthouse will provide guidance and assistance to the customer during this phase responding to questions and providing a review of articles created by the customer.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <p>Train the trainer for end users</p> <ul style="list-style-type: none"> <li>KMS Lighthouse will provide train-the-trainer materials and guidance to enable the customer to effectively ensure system understanding and adoption.</li> <li>Training will be undertaken remotely on-line.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <p>UAT planning, review and support through go-live</p> <ul style="list-style-type: none"> <li>KMS Lighthouse will prepare and share a UAT plan for the customer to undertake covering the key system functionality and the system design.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

- KMS Lighthouse will review the UAT results and if applicable support the customer through a second round of UAT following any system adjustments.
- KMS Lighthouse will provide access and training on the KMS Lighthouse Managed Ticketing System for the customer to report any issues or questions moving forward and explanation of telephone support for critical issues.

## Project Deliverables

KMS Lighthouse will provide the following deliverables during the implementation project:

- **Deployment:**
  - Deployment of production environment on a separate resource group for Gainwell
  - Implement Customer branding to replace background system images and colors
- **Templating:**
  - Create up to ten (10) templates that determine the structure for knowledge articles including titles, content and folder categories
  - Prepare at least two (2) knowledge article examples of each template
- **Training and Documentation:**
  - Facilitation of the content management training course
  - Facilitation of one administrator training class
  - Facilitation of train-the-trainer session including providing presentation materials which Customer may use when sharing with their users
  - Access to the KMS Lighthouse Knowledge Portal for online guides and system information
- **Support:**
  - Provide access to the KMS Lighthouse Managed Ticketing System
  - Documentation guide and review on the process for opening tickets

## Standard KMS Lighthouse Project Timeline

| MONTH 1                  |    |    |                                      | MONTH 2 |    |    |    | MONTH 3 |     |     |                    | MONTH 4 |     |         |     |
|--------------------------|----|----|--------------------------------------|---------|----|----|----|---------|-----|-----|--------------------|---------|-----|---------|-----|
| W1                       | W2 | W3 | W4                                   | W5      | W6 | W7 | W8 | W9      | W10 | W11 | W12                | W13     | W14 | W15     | W16 |
| Installation             |    |    |                                      |         |    |    |    |         |     |     |                    |         |     |         |     |
| Analysis & Customization |    |    |                                      |         |    |    |    |         |     |     |                    |         |     |         |     |
|                          |    |    | Content Feeding                      |         |    |    |    |         |     |     |                    |         |     |         |     |
|                          |    |    | System Integrations & Configurations |         |    |    |    |         |     |     |                    |         |     |         |     |
|                          |    |    |                                      |         |    |    |    |         |     |     | Training & Testing |         |     |         |     |
|                          |    |    |                                      |         |    |    |    |         |     |     |                    |         |     | Go Live |     |

### Installation

- HW/SW preparations
- Product installation

### Analysis & Customization

- Define content (templates, user layouts, homepages, and application authorizations)
- Define entities (content managers, managers, agents, etc.)
- Roles & groups (e.g. sales, service, technical support etc.)
- Creation of templates, layouts, and homepages, and application authorizations
- GUI

### Content Migration

- Content migration plan
- Content managers training
- Migrate all the organizational knowledge into Lighthouse – Gainwell responsibility
- Content migration escort

### System Integrations & Configurations

- SSO
- KMS Lighthouse Insight

### Training and Testing

- Train the Trainers (TTT)
- End User Training (EUT)
- UAT testing

### Go-Live

- Go live support
- Evaluation & changes

## Preconditions to the Project

KMS Lighthouse is a web-based application which operates on modern HTML 5 browsers that include Microsoft Edge and Google Chrome.

To enable KMS Lighthouse to provide services, customer shall meet its obligations hereunder, which shall include providing information, enabling timely access to subject matter experts, scheduling milestone meetings and providing necessary and timely approvals.

KMS Lighthouse will provide a video conferencing platform and links for workshop and training sessions during the project and beyond. If parties in the future agree to on-site sessions, then customer will provide all facilities and AV equipment, including planning room, breakout rooms and required computer equipment for all facilitator led workshop sessions.

The project timeline depends on the depth of customer resources an organization will assign to its benefit and duration. KMS Lighthouse cannot guarantee the duration of this task, hence the date of the launch may be rescheduled appropriately.

## Project Assumptions

Basic assumptions for the project pricing:

- The project activities will be performed by KMS Lighthouse remotely.
- Content migration will be the sole responsibility of the customer, following training on the Lighthouse solution along with accompanying best practices support
- The price of the project does not include the following:
  - 3rd party integrations (Chat bots), these will be priced as needed
  - Onsite visits which, if approved by both parties, will be charged based on the Customer Travel Policy
- Actual project dates will be determined at kick-off and approved by both parties
- Delay caused by Customer may impact timely delivery and/or implementation costs of KMS Lighthouse to Customer
- Changes to configurations, data, and/or integrations as result of Customer UAT may result in additional implementation time and costs if major changes are required outside of the initial scope
- KMS Lighthouse shall not engage in any out-of-scope Services without first obtaining Customer's written approval
- Any system integrations not explicitly listed leveraging APIs, REST service calls, etc. will be scoped, priced and mutually approved under a separate agreement
- The Customer will have an opportunity to test and/or review the build at various implementation stages such as site skin, home page setup, branded user interfaces, and knowledge content loading
- The Customer will have up to twenty (20) consecutive business days of user acceptance testing (UAT) supported by KMS Lighthouse. Go-live will be accepted, if one of the following occurs:
  - Confirmation of UAT or if no response is received after ten (10) consecutive business days from kick-off of UAT
  - Date the Customer starts using the system or part of the system for any purpose other than acceptance testing

## Roles and Responsibilities

The table below shows the roles and responsibilities (R&R) between Gainwell and KMS Lighthouse to ensure timely execution of the entire project.

| TASK                              | SUB-TASK                                             | GAINWELL    | KMS LIGHTHOUSE |
|-----------------------------------|------------------------------------------------------|-------------|----------------|
| Project initialization            |                                                      |             |                |
|                                   | Kick off meetings                                    | Support     | Responsible    |
| Setting-up New Hosted Environment |                                                      |             |                |
|                                   | Standard Installation on environment                 | Informed    | Responsible    |
|                                   | QA for Standard Installation on environment          | Informed    | Responsible    |
|                                   | Customer to review ability to access the environment | Responsible | Support        |
| Analysis and Customization        |                                                      |             |                |
|                                   | Environment analysis                                 | Support     | Responsible    |
|                                   | Template characterization sessions                   | Responsible | Responsible    |
|                                   | Layout characterization                              | Responsible | Responsible    |
|                                   | Homepage structure characterization                  | Responsible | Responsible    |
|                                   | Environment preparation                              | Support     | Responsible    |
|                                   | Layout creation                                      | Support     | Responsible    |
|                                   | Homepage creation                                    | Support     | Responsible    |
|                                   | Templates creation                                   | Support     | Responsible    |
|                                   | Sample items creation                                | Support     | Responsible    |
| Review sessions and approval      |                                                      |             |                |
|                                   | Environment implementation                           | Support     | Responsible    |
|                                   | Sample Items and templates review sessions           | Support     | Responsible    |
|                                   | Layouts and homepage review sessions                 | Support     | Responsible    |
|                                   | Template changes                                     | Support     | Responsible    |
|                                   | Layout changes                                       | Support     | Responsible    |
|                                   | Homepage changes                                     | Support     | Responsible    |
|                                   | Final template review sessions                       | Support     | Responsible    |
|                                   | Final layouts and homepage review sessions           | Support     | Responsible    |
|                                   | Template approval                                    | Responsible | Informed       |
|                                   | Layout and homepage approval                         | Responsible | Informed       |

|                                  | Application troubleshootinging                                                         | Support     | Responsible    |

## Project Team

KMS Lighthouse is committed to the strategic success of the project and partnership.

We are convinced like many other customers, that you will find our team, highly qualified when it comes to best practices, and highly engaged for the success of the partnership. Our product team is also always available to work with our partners and support their main needs.

The tables below outline the main senior contacts who will be involved in the project and relationship.

### Primary Project Contacts

| Name            | Title                    | Email Address                                                        |
|-----------------|--------------------------|----------------------------------------------------------------------|
| Ivon Hernandez  | Project Manager          | <a href="mailto:ivonh@kmslh.com">ivonh@kmslh.com</a>                 |
| Lee Lanir       | Project Team Lead        | <a href="mailto:leel@kmslh.com">leel@kmslh.com</a>                   |
| Landon Gillardi | Customer Success Manager | <a href="mailto:landong@kmslh.com">landong@kmslh.com</a>             |
| Jessica Brazell | Training Manager         | <a href="mailto:jessicab@kmslh.com">jessicab@kmslh.com</a>           |
| Andrew Alfaro   | Systems Engineer         | <a href="mailto:Andrew.alfaro@kmslh.com">Andrew.alfaro@kmslh.com</a> |

### Management Involved in the Project

| Name            | Title                            | Email Address                                            |
|-----------------|----------------------------------|----------------------------------------------------------|
| Elad Bashi      | Director of Delivery and Support | <a href="mailto:eladb@kmslh.com">eladb@kmslh.com</a>     |
| Michael Usachev | Director of Customer Success     | <a href="mailto:michael@kmslh.com">michael@kmslh.com</a> |
| Erez Kreda      | Chief Technology Officer         | <a href="mailto:erezk@kmslh.com">erezk@kmslh.com</a>     |
| Kfir Zuckerman  | VP R&D                           | <a href="mailto:kfir@kmslh.com">kfir@kmslh.com</a>       |
| Amir Benyamini  | Director of Product              | <a href="mailto:amirb@kmslh.com">amirb@kmslh.com</a>     |

This team will also support API use cases and other initiatives related to integrations and communicate future product development plans.

Management Involved in the Strategic Partnership:

| Name          | Title                    | Email Address                                          |
|---------------|--------------------------|--------------------------------------------------------|
| Sagi Eliyahu  | CEO                      | <a href="mailto:sagie@kmslh.com">sagie@kmslh.com</a>   |
| Doron Gower   | Chief Solution Architect | <a href="mailto:dorong@kmslh.com">dorong@kmslh.com</a> |

## 3-Year Term Price for Gainwell

### Agent Package Annual Subscription per Named Users

| Named User Tier                   | Monthly Named User Fee (SRP) | Special Gainwell Discount | Gainwell Discounted Monthly Named User Fee |
|-----------------------------------|------------------------------|---------------------------|--------------------------------------------|
| Minimum bundle of 100 named users | \$25.00                      | 20%                       | \$20.00                                    |
| 101 – 500                         | \$20.00                      | 25%                       | \$15.00                                    |
| 501 – 1,000                       | \$17.00                      | 25%                       | \$12.75                                    |
| 1,001 – 2,000                     | \$14.00                      | 25%                       | \$10.50                                    |
| 2,001 +                           | Special Inquiry              |                           |                                            |

The Annual Subscription Fee includes cloud hosting of the solution, technical support, and updates from time to time.

If Gainwell requires alternative bundles, then KMS Lighthouse will be happy to work together to prepare applicable pricing.

The pricing is based on the tiers above based on the last complete bundle, meaning if 1,500 named users are required the first 1,000 named users will be at the special discounted rate of \$12.75 and the next 500 will be charged at the \$10.50 rate.

\*Special pricing is based on closing a deal by June 30, 2025.

### Optional Additional Modules

## General Assumptions

- Please note that fees are billed annually at the beginning of each year.
- KMS Lighthouse will be responsible for the KMS Lighthouse application, configuration of servers, upgrades, version development, hotfixes, builds and ongoing maintenance and support.
- The Annual Subscription Fee includes hosting by KMS Lighthouse on a dedicated server stack based on the KMS Lighthouse standard terms and practices.
- KMS Lighthouse Public API consumption is provided for reasonable usage.
- The pricing is significantly discounted compared to the SRP with regards to the strategic partnership we are aiming to build with Gainwell.
- Pricing does not include any applicable taxes.
- All pricing is in USD.
- Use of the KMS Lighthouse solution will be in accordance with the EULA between the parties.

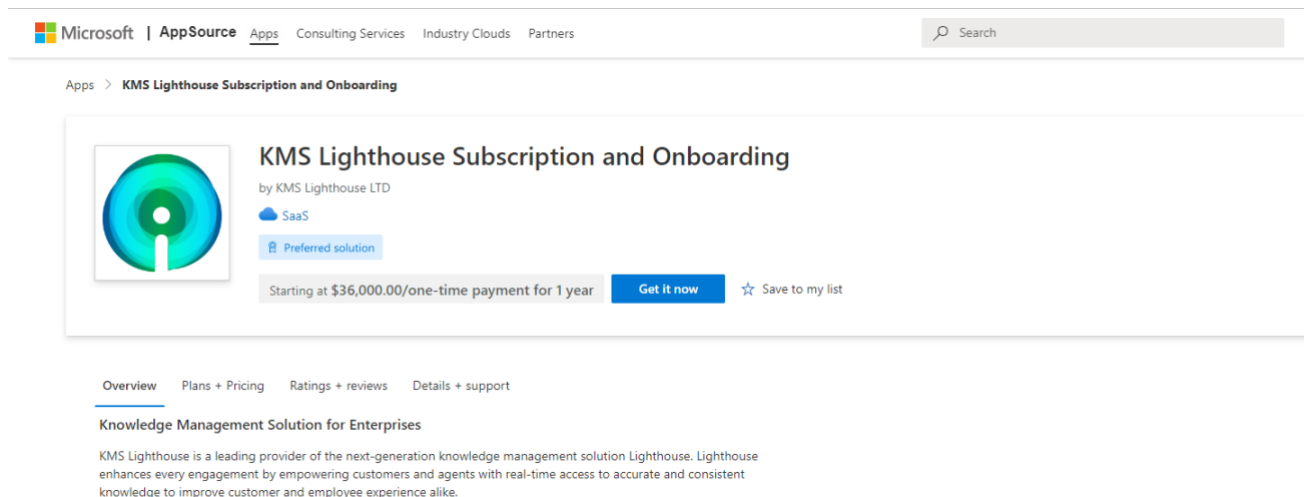

## Transaction via Microsoft Azure Marketplace

The KMS Lighthouse solution is available to purchase through the Microsoft Azure Marketplace, via a private offer prepared specially for you based on these terms. which will be accessible via your Microsoft Azure Tenant ID. The process will eliminate the need for any additional contracts and will be apply towards any Microsoft Azure Consumption Commitment (MACC) your organization may have made to Microsoft Azure to spend over time.

Key benefits:

- No additional contract or paperwork required with KMS Lighthouse; everything is covered by the private offer in the Microsoft Azure Marketplace
- Eligible for MACC
- Identical terms
- Faster vendor onboarding

Link to the Azure Marketplace with KMS Lighthouse SRP: [Microsoft AppSource](#)

The screenshot shows the Microsoft AppSource interface. At the top, there's a navigation bar with 'Microsoft | AppSource' and links for 'Apps', 'Consulting Services', 'Industry Clouds', and 'Partners'. A search bar is on the right. Below the navigation bar, the breadcrumb 'Apps > KMS Lighthouse Subscription and Onboarding' is visible. The main content area features a large card for 'KMS Lighthouse Subscription and Onboarding' by KMS Lighthouse LTD. The card includes a circular logo with a green and blue gradient, a 'SaaS' tag, a 'Preferred solution' badge, and pricing information: 'Starting at \$36,000.00/one-time payment for 1 year'. There are buttons for 'Get it now' and 'Save to my list'. Below the card, there are tabs for 'Overview', 'Plans + Pricing', 'Ratings + reviews', and 'Details + support'. The 'Overview' tab is selected, showing the title 'Knowledge Management Solution for Enterprises' and a brief description: 'KMS Lighthouse is a leading provider of the next-generation knowledge management solution Lighthouse. Lighthouse enhances every engagement by empowering customers and agents with real-time access to accurate and consistent knowledge to improve customer and employee experience alike.'

## Transaction via AWS Marketplace

The KMS Lighthouse solution is available to purchase through the AWS Marketplace, via a private offer prepared specially for your organization based on these terms. This offer will be accessible using your AWS Tenant ID. and will apply towards any AWS Enterprise Discount Program (EDP) commitments your organization has made to AWS.

Link to the AWS Marketplace with KMS Lighthouse's Public Offer: [AWS Marketplace](#)

- No additional contract or paperwork is required with KMS Lighthouse; everything is covered by the private offer in the AWS Marketplace
- Simplified deployment and automated billing.
- Purchase products and services from KMS Lighthouse through the AWS Marketplace could be applied to your annual AWS EDP commitment.
